

Thank you for choosing Basica® Direct, a German quality product. With almost 100 years of experience, Basica® Direct is continuously adapted to the latest scientific nutritional findings. It is produced and controlled according to the highest scientific and quality standards which you can rely on every day.

Basica® Energy Diet Acid reduction – noticeable energy

A stable acid-base balance and a functioning energy metabolism are important conditions for vitality and performance.

In our stressful everyday life, time often lacks to maintain the well-balanced nutrition the body needs in order to neutralize acid.

Basica® Direct supplies the body with alkaline minerals and valuable trace elements:

- **Zinc contributes to normal acid-base metabolism and is important for a normal cognitive function.**
- **Magnesium helps to reduce tiredness and fatigue.**
- **Calcium and magnesium support the normal energy-yielding metabolism.**

Excess acid caused by unbalanced nutrition

According to proven nutritional findings, a high consumption of meat, cheese and cereals delivers excess acid. A sufficient consumption of fruits or vegetables provides alkaline minerals in order to neutralize acid.

Insufficient supply of minerals

Tiredness, fatigue and decreasing cognitive functions can be the first signs of a lack of alkaline minerals and micro-nutrients in the body. Diets and fasting periods can also cause a deficiency in mineral supply.

Noticeable energy with Basica®

Basica® Direct provides your body with alkaline minerals in the form of organic mineral compounds and valuable trace elements. Zinc contributes to normal acid-base metabolism. Magnesium helps to reduce tiredness and fatigue. The combination with calcium supports the energy-yielding metabolism. Additionally, zinc contributes to a normal cognitive function.

Important information

How to further activate your metabolism with Basica® energy diet:

- **Daily exercise, for example running, cycling or Nordic walking. Sweating once in a while is good for circulation and activates your metabolism.**
- **Try to relax consciously every day. Breathing exercises, yoga or a relaxing bath help to reduce stress.**
- **Drink at least 2 litres of mineral water, unsweetened fruit juice spritzers or – for a change – herbal or fruit tea a day. An extensive supply of fluid is necessary to excrete acid more easily via the kidneys.**
